

Enamel Design Guide

22mm
Hard Enamel
8mm hole

20mm
Soft Enamel
8mm hole

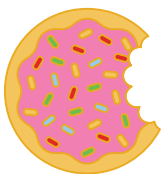

14mm
Soft/Hard Enamel
5.5mm hole

12mm
Soft Enamel
3mm hole

When to 'cut out'

Cut out is where a clear hole is made or that the hole inside a badge is larger than the opening gap around the edge, see examples below

No cut out

Center cut out

Center cut out

No cut out

Clutch Position

The base of a pin needs 4mm space to fix to the reverse of the badge. The standard clutch diameter is approx 10mm.

12mm badge with 3mm hole leaves just enough space for clutch pin

22mm badge has space for double clutch if requested

*This is the smallest and in some designs we advise leaving more space than this, each design is different.
